

Data Visualization: Health Outcomes of Charlotte

...

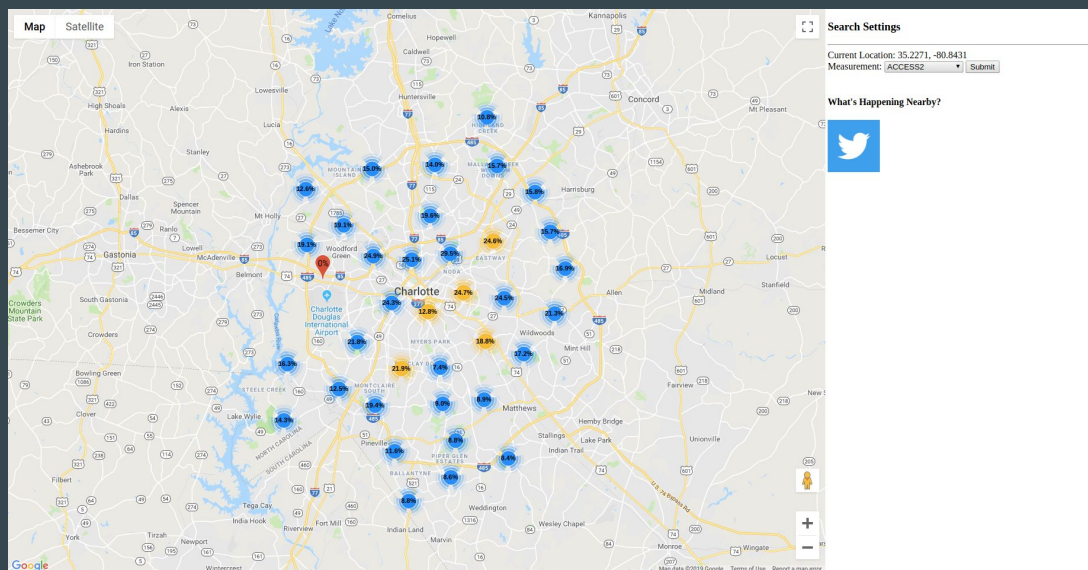

Andrew Robinson, Hunter Horde, and Nick Rogie

Problem Statement

- Ideally, people with company influence such as CEOs and other business owners would have excellent statistical analysis skills.
 - This is usually not the case
- Our team has created a visualization tool to help those important people interpret data gathered by clinics.

Solution Objectives

- Fetch health data from the database
 - Users can quickly identify trends and hotspots of various location-based data.
- Different data sets can be integrated as long as there is associated location data.

Moving Forward

- Intelligent data comprehension
- Social media
- Nationwide coverage
- More map features (filters, better accessibility, etc)
- More statistics visualized
